

<p><b>Unit: 2-D and 3-D Measurement</b> <b>Lesson: 3-D Measurement Review</b></p> <p>1. Is there meaningful choice in learning for students? 2. Are student differences considered in planning (e.g. readiness/learning style)? 3. How is the learning made accessible/engaging for all students (e.g. open tasks with multiple entry points)?</p>		<ul style="list-style-type: none"> <li><input type="checkbox"/> Graph Calc</li> <li><input type="checkbox"/> ti-navigator</li> <li><input type="checkbox"/> Alg Tiles</li> <li><input type="checkbox"/> 1 cm Link Cubes</li> <li><input type="checkbox"/> 2 cm Link Cubes</li> <li><input type="checkbox"/> Geo-Solids</li> <li><input type="checkbox"/> Venn Diagram</li> <li><input type="checkbox"/> x-y grid</li> <li><input type="checkbox"/> pattern blocks</li> <li><input type="checkbox"/> chart papr/mkrs</li> <li><input type="checkbox"/> fraction circles</li> <li><input type="checkbox"/> fraction strips</li> <li><input type="checkbox"/> geoboard</li> <li><input type="checkbox"/> angle arm</li> <li><input type="checkbox"/> rulers</li> </ul>
<p><b>Math Learning Goals</b></p> <p>1. Solve measurement problems with 3-D shapes 2. Make connections between equivalent measurement representations (i.e. between algebra and physical or pictorial representations) 3. Solve and evaluate equations in a measurement context with and/or without technology</p>	<p>MFM1P Overall Expectations</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Solving Problems Involving Proportional Reasoning</li> <li><input type="checkbox"/> Simplifying Expressions and Solving Equations</li> <li><input type="checkbox"/> Using Data Management to Investigate Relationships</li> <li><input type="checkbox"/> Determining Characteristics of Linear Relations</li> <li><input type="checkbox"/> Connecting and Solving Problems With Linear Representations</li> <li><input type="checkbox"/> Optimal Values of Measurements of Rectangles</li> <li><input type="checkbox"/> Solving Problems With Perimeter, Area, and Volume</li> <li><input type="checkbox"/> Investigating and Applying Geometric Relationships</li> </ul>	
<p><b>Minds On...</b></p> <p>1. Character Education introduction. At the start of the period, or as students enter class, they respond to an "Agree-Disagree" continuum on a character quotation of the day using the interactive whiteboard. The quote for this lesson was: "They may forget what you said, but they will never forget how you made them feel" by Carl W. Buechner. Students have choice in participating or not participating and if they participate they record the degree to which they agree or disagree with the statement on the interactive whiteboard. A brief discussion of the quotation follows with students. This introduction sets the stage for DI, students have meaningful choice, all opinions are valued and every student can contribute to our learning.</p> <p>2. The formal math lesson begins with the teacher identifying the specific learning goals of the day, written on the whiteboard, connecting to big ideas of the unit which are posted on chart paper. There is explicit modeling of how to connect representations using a "visualizing" strategy. The teacher performs a "think-aloud" to model the meta-cognitive process used while visualizing to make explicit connections between representations in measurement, specifically, connecting area formulas of composite shapes to their pictorial representations. Note that the minds-on activity to come for students is 3-D whereas the "think-aloud" is for 2-D. This is purposeful to have them transfer the visualizing strategy from 2-D to 3-D. See Page 2 of the Interactive whiteboard File.</p> <p>3. "I have...who has" minds-on activity where the students apply a visualizing strategy to connect algebraic and 3-D representations. This is a cooperative and differentiated activity using manipulatives. Half of the students have cards with algebraic representations and the other half have equivalent 3-D model representations. Students have to find a partner with an equivalent representation by making connections. The representations varied in complexity and were assigned based on student readiness. To summarize, partners justify, using appropriate vocabulary and mathematical reasoning, why their representations are equivalent.</p>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Narrative – Tell/read a story</li> <li><input type="checkbox"/> Narrative – Pose questions, problem</li> <li><input type="checkbox"/> Logical/Quant – Analyze graph or table</li> <li><input type="checkbox"/> Logical/Quant – graphic organizer concepts</li> <li><input type="checkbox"/> Foundational – Explain theory, big questions</li> <li><input type="checkbox"/> Aesthetic – Picture, video</li> <li><input type="checkbox"/> Experiential – experiment, game, manipulatives</li> <li><input type="checkbox"/> Placemat</li> <li><input type="checkbox"/> Anticipation Guide</li> <li><input type="checkbox"/> Tiered Prior Knowledge Questions</li> </ul>	<p><input type="checkbox"/> Choice <input type="checkbox"/> Readiness <input type="checkbox"/> Interest <input type="checkbox"/> Learning Style (MI, VAK) <input type="checkbox"/> Intelligence Preference (triarchic)</p>

<b>Action!</b>	<p><b>Learning Centres</b> Students pre-select two of three learning centres the day before this lesson based on the “People-Data-Things” differentiation structure. Learning activities earlier in this unit are organized with the People, Data and Things framework to allow students to develop a working knowledge of the differentiation structure and provide opportunities to build an understanding of their own strengths and interests related to this differentiation structure. The three learning centres are:</p> <ol style="list-style-type: none"> <li>1. People (supportive of students with interest/strength in interpersonal intelligence/auditory learning style) – Peer coaching cooperative activity with students consolidating their understanding of solving versus evaluating equations in a measurement context.</li> <li>2. Things (supportive of students with interest/strength in bodily intelligence/kinesthetic learning style) – Problem solving in measurement using manipulatives.</li> <li>3. Data (supportive of students with interest/strength in spatial or logical/mathematical intelligence/visual learning style) – Technology is used to make connections between representations.</li> </ol> <p>Materials and handouts are set out at three locations. Please see the attached handouts for the specific details of each centre. The teacher identifies locations of the centres and reminds students of key learning attributes for each station. For example, at the “People” learning centre, review attributes of an effective “math coach” e.g. supportive, identifies mistakes but does not correct mistakes when coaching (i.e. questions their partner to lead them towards correcting their work). Students complete two of three learning centres during the class.</p> <p><i>Assessment for learning</i> occurs as the teacher circulates between the stations. Learning centres afford an opportunity to assess the Learning Skills especially “Working Independently” and “Teamwork”.</p>				<ul style="list-style-type: none"> <li><input type="checkbox"/> Tiering – Par’II Tasks</li> <li><input type="checkbox"/> Cooperative Learning</li> <li><input type="checkbox"/> Learning Centres</li> <li><input type="checkbox"/> Choice Boards</li> <li><input type="checkbox"/> Investigation</li> <li><input type="checkbox"/> Teaching Through Problem Solving</li> <li><input type="checkbox"/> Direct Instruction</li> </ul>
	<b>Consolidate</b>	<ol style="list-style-type: none"> <li>1. To assess achievement of math goals for the day, an open question comparing representations is used. <i>“How are the representations below the same, different?”</i> <ol style="list-style-type: none"> <li>a. <math>128 = \pi (7)^2 (h)</math></li> <li>b. <math>V = \frac{1}{3}\pi (7)^2 (12)</math></li> </ol> <p>This question is sufficiently open ended to allow students to compare these representations based on: cylinder in (a) versus cone in (b), solving in (a) versus evaluating in (b), determining the volume in (b) then compare volumes, identify that <math>\pi</math> is part of both equations and extend that to noting area of a circle within each equation, radius is 7 in both representations, height is unknown in (a) whereas volume is unknown in (b), they could actually solve for the height in (a) and then compare heights. Students could explore with the graphing calculator, draw pictures etc.</p> </li> <li>2. To assess effectiveness of the DI strategy, exit cards are used. Students respond and post their responses to the question <i>“Which center (People, Things, Data) today helped you learn the most about math? Why?”</i> The lesson is closed out by discussing exit card responses in the context of connecting learning preferences to academic success.</li> </ol>			
<p><i>Represent</i></p> <ul style="list-style-type: none"> <li>• mathematize a situation using concrete materials,pictures, diagrams, graphs, tables, numbers, words or algebra</li> </ul>		<p><i>Connecting</i></p> <ul style="list-style-type: none"> <li>• see how new concepts and skills build on old ones</li> <li>• apply mathematics when making connections between concepts and between math and real-life</li> </ul>	<p><i>Selecting Tools and Strategies</i></p> <ul style="list-style-type: none"> <li>• consider the question before I choose my computational strategy or tool</li> <li>• justify a strategy or use of a mathematical tool</li> </ul>	<p><i>Reasoning and Proving</i></p> <ul style="list-style-type: none"> <li>• hypothesize and make conjectures</li> <li>• decide how to test my hypothesis</li> <li>• test my conjecture</li> <li>• infer, justify, and conclude</li> </ul>	<p><i>Reflecting</i></p> <ul style="list-style-type: none"> <li>• think about reasonableness</li> <li>• consider the implications of data collected</li> <li>• self-monitor my progress</li> </ul>

## BLM 3.2 Minds-On Black line Masters "I have...Who has?"

### Grade 9 MFM1P

Photo of 3-D Figures used for the Minds-On Activity

Cards for "I Have...Who Has?"

$$V = \frac{1}{2} \left( \frac{4}{3} \pi r^3 \right) - \frac{1}{2} blh$$

$$V = \frac{1}{2} (\pi r^2 h) + lwh$$

## BLM 3.3 Station 1: *People and Practice*

### Solving and Evaluating Measurement Formulas – Peer Coaching

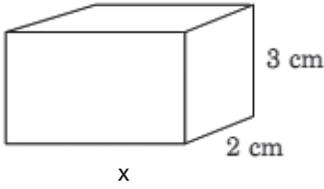

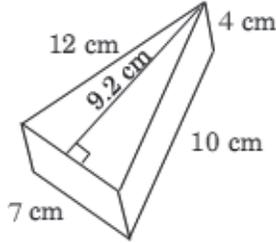

A	_____
B	_____

If the “Unknown” is already isolated after *substitution* then you are “*Evaluating*” the equation.  
If the “Unknown” is **not** isolated after *substitution* then you are “*Solving*” the equation.

You will work on peer coaching in this activity.

On this first page, however, you need to identify the **error** in each solutions presented below *with your partner*. There is a mistake in each question. With your partner, identify the mistake and make the corrections for the rest of the solution. The error could be (1) selecting the wrong formula, (2) substituting in the wrong values or (3) a calculation error.

Circle the error and make corrections for each solution.

	1. <b>V = 39 cm<sup>3</sup></b> 	Initialed by coach as correct	2. 	Initialed by coach as correct
Select formula	$V = lwh$		$V = \frac{1}{2}lwh$	
Substitute “Known” Values	$39 = (x)(2)(3)$		$V = \frac{1}{2}(4)(7)(12)$	
Identify as 1. “Solving”; or 2. “Evaluating”	Solving		Eval.	
The answer – the value of the unknown	$x = 234 \text{ cm}$ ∴ Length = 234 cm		$V = 172 \text{ cm}^3$	

## Solving and Evaluating Measurement Formulas – Peer Coaching

A	_____
B	_____

In each round, “**Person A**” selects a shape from “**Row A**” in the *diagrams* below then determines either the volume or the missing dimension. Person B coaches A and checks that A is correct in each step. B and A then switch roles to finish Round 1. Then move on to Rounds 2 and 3.

### Diagrams

\*\* On some diagrams, you do not need all of the dimensions given to determine the volume.

**Person A:** Select 3 shapes from Row A.

**Person B:** Select 3 shapes from Row B.

<p>A.1 <math>V = 39 \text{ cm}^3</math></p>	<p>A.2</p>	<p>A.3 <math>V = 35 \text{ cm}^2</math></p>	<p>A.4</p>
<p>B.1 <math>V = 580 \text{ cm}^3</math></p>	<p>B.2</p>	<p>B.3 <math>V = 4000 \text{ cm}^3</math></p>	<p>B.4</p>

If the “Unknown” is already isolated after *substitution* then you are “*Evaluating*” the equation or formula

If the “Unknown” is not isolated after *substitution* then you are “*Solving*” the equation or formula

<b>Round 1</b>	<b>"A" Writes with "B" Coaching</b>	Initialed by coach as correct	<b>"B" Writes with "A" Coaching</b>	Initialed by coach as correct
Select shape and appropriate formula				
Substitute "Known" Values				
Identify as 1. "Solving"; or 2. "Evaluating"				
The answer – the value of the unknown				

### Round's 2 and 3 – Peer Coaching

If the "Unknown" is already isolated after *substitution* then you are "Evaluating" the equation.  
If the "Unknown" is not isolated after *substitution* then you are "Solving" the equation.

Round 2	"A" Writes with "B" Coaching	Initialed by coach as correct	"B" Writes with "A" Coaching	Initialed by coach as correct
Select shape and appropriate formula				
Substitute "Known" Values				
Identify as 1. "Solving"; or 2. "Evaluating"				
The answer – the value of the unknown				

Round 3	"A" Writes with "B" Coaching	Initialed by coach as correct	"B" Writes with "A" Coaching	Initialed by coach as correct
Select shape and appropriate formula				
Substitute "Known" Values				
Identify as 1. "Solving"; or 2. "Evaluating"				
The answer – the value of the unknown				

## Station 2: *Data* and the Graphing Calculator

### Using the Graphing Calculator to Solve Measurement Problems

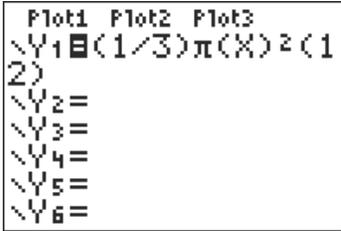

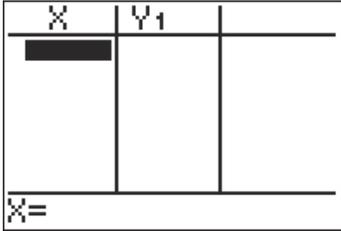

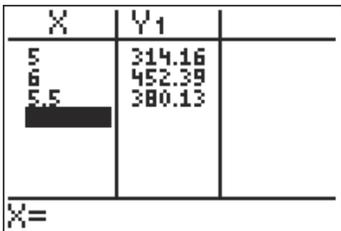

Labeled  
Diagram

Determine the formula and shape represented by the following equation:

$$316 = \frac{1}{3} \pi x^2 (12)$$

- What does the  $\frac{1}{3}$  tell you? What types of volume formulae have  $\frac{1}{3}$  in them?
- What does the " $\pi$ " tell you about the type of volume formula?
- Make a conclusion about what shape this is. Draw the shape and label the dimensions.
- Determine the missing dimension by using the graphing calculator:

This can be solved with the "Table Feature" on the graphing calculator.

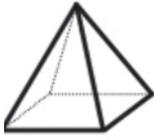

Step	Key strokes	Your screen should look like...
1. Set up your table using TBLSET	 	
2. Input your equation	  Y1 = $(\frac{1}{3}) \pi (x)^2 (12)$ The $(\frac{1}{3})$ represents one-third	
3. View the table.	   Press  until the table is clear.	
4. Use guess and check until the volume (Y1) is 316 cm <sup>3</sup> .	You will have to keep guessing and checking until you get your answer of Y1 = 316 cm <sup>3</sup> which is a volume of 316 cm <sup>3</sup> .	

Repeat this process for each equation on the next page.

## Solving Measurement Equations With The Graphing Calculator.

Complete the table below by connecting the algebraic representation to the appropriate measurement formula.

					
$V = lwh$	$V = \frac{1}{3}lwh$	$V = \pi r^2h$	$V = \frac{1}{3}\pi r^2h$	$V = \frac{1}{2}lwh$	$V = \frac{4}{3}\pi r^3$

Equation	Draw shape and label the dimensions.	Name the unknown dimension.	Answer showing table entries from TI-73				
a. $100 = \pi (7)^2 (x)$			<table border="1"> <tr> <td>X</td> <td>Y1</td> </tr> <tr> <td>█</td> <td></td> </tr> </table>	X	Y1	█	
X	Y1						
█							
b. $250 = (7) (12) (x)$			<table border="1"> <tr> <td>X</td> <td>Y1</td> </tr> <tr> <td>█</td> <td></td> </tr> </table>	X	Y1	█	
X	Y1						
█							
c. $50 = \frac{4}{3}\pi x^3$			<table border="1"> <tr> <td>X</td> <td>Y1</td> </tr> <tr> <td>█</td> <td></td> </tr> </table>	X	Y1	█	
X	Y1						
█							
d. $354 = \frac{1}{3}\pi (15)^2 (x)$			<table border="1"> <tr> <td>X</td> <td>Y1</td> </tr> <tr> <td>█</td> <td></td> </tr> </table>	X	Y1	█	
X	Y1						
█							
e. $2500 = \pi (x)^2 (30)$			<table border="1"> <tr> <td>X</td> <td>Y1</td> </tr> <tr> <td>█</td> <td></td> </tr> </table>	X	Y1	█	
X	Y1						
█							
f. $375 = \frac{1}{2}\left(\frac{3}{3}\pi (x)^3\right)$			<table border="1"> <tr> <td>X</td> <td>Y1</td> </tr> <tr> <td>█</td> <td></td> </tr> </table>	X	Y1	█	
X	Y1						
█							

## Station 3: *Things and Gold*

Name: \_\_\_\_\_

### How much is that Worth!

#### Your Task

Select 5 geo-solids from the envelope and determine how many loaves of bread you could purchase with the 5 geo-solids if they were made out of solid (24 K) gold.

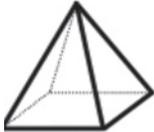

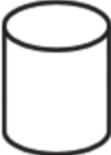

#### Information You Need

Gold is quite pricey at about \$40.00 per gram. It is also incredibly heavy with a density of 19 grams per  $\text{cm}^3$ . To compare, the plastic  $1 \text{ cm}^3$  blocks at this learning station each have a mass of about 1.5 grams (their density is 1.5 grams per  $\text{cm}^3$ ). Bread costs about \$2.00 per loaf.

Before you determine the volume of each geo-solid, please use the  $1 \text{ cm}^3$  blocks to estimate the volume. Why is it important to estimate the volume first before doing calculations?

Show all your work on the paper provided. Include labeled diagrams, your estimates, formulas and calculations. Keep your work organized. Clear communication is important.

**Good luck.**

					
$V = lwh$	$V = \frac{1}{3} lwh$	$V = \pi r^2 h$	$V = \frac{1}{3} \pi r^2 h$	$V = \frac{1}{2} lwh$	$V = \frac{4}{3} \pi r^3$
